Note Language：**English**   Version：**2**   **Validity**：   Valid from 19.03.2007

Summary

Symptom

You are facing the need to configure the supported language within the portal, mainly the available languages within the user personalization dialog (User Language), the available languages with the portal object wizards (Master Language) and the portal content translation tool (Target Language). There is the need to either restrict the availabe languages or to add new supported languages.

More Terms

Languages, Portal Content Translation, translation, User Language, Portal Language

Cause and Prerequisites

SAP NETWEAVER 04 and higher, SAP Enterprise Portal SP2

Solution

USER PERSONALIZATION AND UME ADMINISTRATION:
##
In order to change the available languages for the user personalization dialog follow the guide in the portal documentation:
http://help.sap.com/saphelp_nw04/helpdata/en/49/e607426338da6fe10000000a 1550b0/content.htm and the attached note 624929.

PORTAL ADMINISTRATION AND CONTENT TRANSLATION:
##
For SAP NETWEAVER 04 SPS19 and 2004s SPS10 (+ higher):

In order to change the available languages for the portal administration (object wizards) and portal content translation you have to confige the locale_list_service in the portal service configuration:

1. Navigate to the service locale_list_service under the application com.sap.portal.admin.wizardframework, and right click for configuration.
2. Add/Remove locales to source/target locales lists separated by a comma, a semicolon or a space.
3. Save the changes and restart the service

For installation prior to SAP NETWEAVER 04 SPS19 and 2004s SPS10:

In order to change the available languages for the portal administration (object wizards) and portal content translation you have
go to
\usr\sap\<INSTANCE>\JC<INSTANCE_NR>\j2ee\cluster\server
<SRV_NR>\apps\sap.com\irj\servlet_jsp\irj\root\WEB-INF\
portal\portalapps\com.sap.portal.admin.wizardframework\config

You will see a file called availableLocales.properties, this is where all the languages are defined, you can just change it and you will see the change after restarting the cluster.

In a clustered environment you have to do this change (change of the properties file) on each cluster node. As this is cumbersome, you might take the par file of the service

(com.sap.portal.admin.wizardframework.par), change the
availableLocales.properties, and then redeploy the par to the portal. Thus
the file will be changed/replaced on all cluster nodes. If you apply a
patch the file will be only changed if the patch contains
a fixed version of the service (com.sap.portal.admin.wizardframework.sda).

For installation of SAP NETWEAVER 7.10:

The language service will be a service that can be configured via the
Visual Administrator tool of the JEE engine.

1. Logon to the Visual Administrator
2. On the Service node select the Locales Configuration Services and edit
the languages lists.
3. The source and target locales lists are seperated by a comma, a
semicolon or a space. After changing the list press the Update button and
the save button at the top.

Header Data

Release Status:	Released for Customer
Released on:	19.03.2007 11:24:31
Priority:	Recommendations/additional info
Category:	Consulting

Main Component	EP-PIN Portal Infrastructure
Additional Components:	
	EP-PIN-PCD-TRA Translation Tool

Valid Releases

Software Component	Release	From Release	To Release	and Following
